

# ROXANE

PRODUCT REVIEW

Creation & Customisation

## Roxy 100-150

The Roxy 100 or 150 is an automatic machine with manual handling of the composition beakers. Thanks to its speed, silence and its great ease of use, it enables the laboratory's working potential to be increased within wide limits.

## Qualité & précision

Thanks to its highly sophisticated VDS-101 valve control process, each dosage is performed very accurately and repeatedly within the imposed tolerance window. The system eliminates the risk of cross-pollution between raw materials. All operations on the Roxy 100-150 are systematically tracked. The system adapts automatically and continuously to fluctuations in the working environment (temperature, tank filling) without any human action.

## Configuration

The Roxy 100-150 incorporates the storage tanks for the 100 to 150 liquid raw materials which are arranged in crown around the vertical axis of the machine. The control system of the VDS-101 distribution equipment, the scale and the composition beaker are rotated around the same axis.
